## New M5 Project

Report No: DAT15592
WestConnex

## Executive Summary

The New M5 project is the second stage of the 33 km WestConnex motorway to connect Sydney's west and south-west with the Sydney Airport and the Port Botany precinct. The New M5 will provide twin underground motorway tunnels, nine kilometres long, from Kingsgrove to a new St Peters Interchange at the site of the old Alexandria landfill. The St Peters Interchange will provide motorists with connections to Alexandria and Mascot. It also includes connections to the future Sydney Gateway and M4-M5 Link. The New M5 tunnels will be marked for two lanes in each direction, with capacity to add a third and also include underground connection points for the M4-M5 Link and the proposed F6 Extension.

Ecotech Pty Ltd has been commissioned by CPB Dragados Samsung Joint Venture for air quality monitoring, data collection and reporting at eight external ambient air quality monitoring (AQM) stations: Arncliffe 1 (West Botany St) AQM, Arncliffe 2 (Eve St) AQM, St Barton Park AQM, Kingsgrove 1 (MOC1) AQM, Kingsgrove 2 (Kingsgrove Rd) AQM, St Peters 1 (Campbell St) AQM, St Peters 2 (SPI) AQM and St Peters 3 (St Peters St) AQM.

### 1.0 Introduction

Ecotech Pty Ltd was commissioned by CPB Dragados Samsung Joint Venture to provide monitoring and data reporting for the New M5 Project ambient air quality and weather monitoring network, located as detailed in Table 1. Ecotech commenced data collection in December 2018.

This report presents the available data for February 2020.
The data presented in this report:

- Describes air quality measurements;
- Compares monitoring results;
- Has been quality assured;
- Conforms with NATA accreditation requirements, where applicable.

### 2.0 Monitoring and Data Collection

### 2.1. Siting Details

The WestConnex New M5 Project monitoring network consists of eight ambient air quality and weather monitoring stations. The stations location and siting details are described below.

Table 1: WestConnex New M5 NSW Project monitoring sites locations

| Site Name | Geographical Coordinates | Height Above Sea Level <br> (m) |
| :---: | :---: | :---: |
| Arncliffe 1 (West Botany St) | $33^{\circ} 56{ }^{\prime} 13.92$ S, $151^{\circ} 9^{\prime} 6.34 " E$ | 3 |
| Arncliffe 2 (Eve St) | $33^{\circ} 56{ }^{\prime} 23.77$ S, 151${ }^{\circ}{ }^{\prime} 12.73 " \mathrm{E}$ | 7 |
| Barton Park | $33^{\circ} 57{ }^{\prime} 3.26 " S, 151{ }^{\circ} 9^{\prime} 4.98{ }^{\text {"E }}$ | 26 |
| Kingsgrove 1 (MOC1) | $33^{\circ} 56{ }^{\prime} 27.60$ S, 151${ }^{\circ}{ }^{\prime} 36.24$ "E | 10 |
| Kingsgrove 2 (Kingsgrove Rd) | $33^{\circ} 56{ }^{\prime} 18.31$ "S, $151^{\circ} 5^{\prime} 59.02{ }^{\prime \prime} \mathrm{E}$ | 5 |
| St Peters 1 (Campbell St) | $33^{\circ} 54^{\prime} 44.71$ "S, $151^{\circ} 10^{\prime} 43.76{ }^{\prime \prime} \mathrm{E}$ | 4 |
| St Peters 2 (SPI) | $33^{\circ} 55^{\prime} 3.16$ S, $151^{\circ} 10^{\prime} 50.16 " \mathrm{E}$ | 8 |
| St Peters 3 (St Peters St) | $33^{\circ} 54^{\prime} 46.19$ S, 151 ${ }^{\circ} 10^{\prime} 31.91{ }^{\prime \prime E}$ | 12 | ACCREDITATION

Audits were conducted to assess stations siting against the guidelines in AS/NZS 3580.1.1:2016 "Methods for sampling and analysis of ambient air - guide to siting air monitoring equipment" have been completed as follows:

- Arncliffe 1 (West Botany St) on 18/02/2019
- Arncliffe 2 (Eve St) on 01/02/2019
- Barton Park on 05/02/2019
- Kingsgrove 1 on 15/01/2020
- Kingsgrove 2 on 13/03/2019
- St Peters 1 (Campbell St) on 18/02/2020
- St Peters 2 (SPI) on 11/02/2019
- St Peters 3 (St Peters St) on 04/02/2019

Unless detailed below, this siting of this station is in accordance with the guidelines in AS/NZS 3580.1.1:2016. The above stations are classified as Neighbourhood stations according to AS/NZS 3580.1.1:2016.

The meteorological siting audit has not been performed at all sites yet and will be re-scheduled at the next suitable maintenance visits.

Figure 1: New M5 Project Monitoring Station Locations

## WestConnex

### 2.2. Monitored Parameters

Table 2 below details the parameters monitored and the instruments used at the New M5 Project monitoring stations. Appendix 1 defines any abbreviated parameter names used throughout the report.

Table 2: Parameters measured at the New M5 Project monitoring stations

| Stations | Parameter Measured | Instrument and Measurement Technique | Elevation |
| :---: | :---: | :---: | :---: |
| Arncliffe 1 (West Botany <br> St) <br> Arncliffe 2 (Eve St) | CO | Ecotech Serinus 30 - NDIR gas filter correlation infrared photometry | 2 m |
|  | $\mathrm{NO}, \mathrm{NO}_{2}, \mathrm{NO}_{\mathrm{x}}$ | Ecotech Serinus 40 - gas phase chemiluminescence | 2 m |
|  | PM 2.5 | Met One BAM 1020 - Beta ray attenuation | 2 m |
|  | PM ${ }_{10}$ | Thermo - 1400 ab TEOM (Tapered Element Oscillating Microbalance) | 2m |
| Kingsgrove 1 (MOC1) Kingsgrove 2 (Kingsgrove | Differential Temperature (elevation 2 m ) | Met One 062MP | 2 m |
| St Peters 1 (Campbell St) <br> St Peters 2 (SPI) <br> St Peters 3 (St Peters St) | Differential Temperature (elevation 10 m ) | Met One 062MP | 10 m |
|  | Wind Speed <br> (Horizontal, elevation 10m) | Gill Windsonic Op3 | 10 m |
|  | Wind Direction (elevation 10 m ) | Gill Windsonic Op3 | 10 m |
|  | Sigma | Calculation | - |

## WestConnex

### 2.3. Data Collection Methods

Table 3 below shows the methods used for data collection.
Table 3: Methods

| Parameter <br> Measured | Data Collection Methods Used | Description of Method |
| :---: | :---: | :---: |
| $\mathrm{NO}, \mathrm{NO}_{2}, \mathrm{NO}_{\mathrm{x}}$ | AS 3580.5.1-2011 | Methods for sampling and analysis of ambient air - Method <br> 5.1: Determination of oxides of nitrogen-Chemiluminescence method |
|  | Ecotech Laboratory Manual | In-house method 6.1-Oxides of nitrogen by chemiluminescence |
| CO | AS 3580.7.1-2011 | Methods for sampling and analysis of ambient air. Method 7.1: Determination of carbon monoxide-Direct-reading instrumental method |
|  | Ecotech Laboratory Manual | In-house method 6.3 - Carbon monoxide by gas filter correlation spectrophotometry |
| PM 10 (TEOM) | AS 3580.9.8-2008 | Methods for sampling and analysis of ambient air. Method 9.8: Determination of suspended particulate matter - $\mathrm{PM}_{10}$ continuous direct mass method using a tapered element oscillating microbalance analyser. |
|  | Ecotech Laboratory Manual | In-house method 7.3- Particulates - $\mathrm{PM}_{2.5}, \mathrm{PM}_{10}$ by TEOM |
| PM ${ }_{2.5}$ (BAM 1020) | AS/NZS 3580.9.12-2013 ${ }^{1}$ | Methods for sampling and analysis of ambient Air - Method 9.12: Determination of suspended particulate matter-PM ${ }_{2.5}$ beta attenuation monitors |
|  | Ecotech Laboratory Manual | In-house method 7.5 - Measurement of $\mathrm{PM}_{10}, \mathrm{PM}_{2.5}$ and TSP using Beta Attenuation Monitor |
| Vector Wind Speed (Horizontal) | AS 2923-1987 ${ }^{2}$ | Methods for sampling and analysis of ambient air. Method 14: Meteorological monitoring for ambient air quality monitoring applications |

${ }^{1}$ As approved by the Department of Planning and Environment on 8th October 2017.
${ }^{2}$ Superseded by AS/NZ 3580.142014 but specifically referenced in ministerial conditions.

| Parameter <br> Measured | Data Collection Methods Used | Description of Method |
| :---: | :---: | :---: |
|  | Ecotech Laboratory Manual | In-house method 8.1 - Wind speed (Horizontal) by anemometer |
| Vector Wind Direction | AS 2923-1987 ${ }^{3}$ | Methods for sampling and analysis of ambient air. Method 14: Meteorological monitoring for ambient air quality monitoring applications |
|  | Ecotech Laboratory Manual | In-house method 8.3-Wind direction by anemometer |
| Sigma | AS 2923-1987 ${ }^{3}$ | Methods of sampling and analysis of ambient air. Method 14: Meteorological monitoring for ambient air quality monitoring applications |
|  | Ecotech Laboratory Manual | In-house method 8.3 Wind direction by anemometer |
| Atmospheric Temperature | USEPA (2000) EPA 454/R- $99-005^{3}$ | Methods for sampling and analysis of ambient air. Method 14: Meteorological monitoring for ambient air quality monitoring applications |
|  | Ecotech Laboratory Manual | In-house method 8.4 - Temperature ambient by thermoelectric techniques |

Note: Two different measurement techniques are being used for monitoring $\mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ at the New M5 Project Stations. Studies conducted in Canada, the United States and other countries have found that the Tapered Element Oscillating Microbalance (TEOM) monitors can under report concentrations compared to the Beta Attenuation Monitors (BAM), especially when the air contains a large proportion of semi-volatile particulate matter, which may be the case during cooler seasons when the air contains less coarse dust and a greater proportion of semi-volatile organic compounds such as those associated with wood smoke. As a result, it is normal to see occasional periods where $\mathrm{PM}_{10}<\mathrm{PM}_{2.5}$ and this situation does not necessarily indicate a fault with either instrument.

[^0]
### 2.3.1. NATA Endorsement and Conformity with Standards

Unless stated below, parameters are monitored at the new M5 Stations according to the methods detailed in Table 3 above.

### 2.3.2. Data Acquisition

Data acquisition is performed using a PC based Congrego logger situated at each of the monitoring sites. Each logger is equipped with a 3G modem for remote data collection. The recorded data is remotely collected from the Air Quality Monitoring Station (AQMS) loggers on a daily basis (using Airodis ${ }^{\mathrm{TM}}$ version 5.1.4) and stored at Ecotech's Environmental Reporting Services (ERS) department in Melbourne, Australia. Data samples are logged in 5-minute intervals.

### 2.4. Data Validation and Reporting

### 2.4.1. Validation

The Ecotech ERS department performs daily data checks to ensure maximum data capture rates are maintained. Any equipment failures are communicated to the responsible field engineers for urgent rectification. Ecotech ERS maintains two distinct databases containing non-validated and validated data respectively.

The validated database is created by duplicating the non-validated database and then flagging data affected by instrument faults, calibrations and other maintenance activities. The data validation software requires the analyst to supply a valid reason (e.g. backed by maintenance notes, calibration sheets etc.) in the database for flagging any data as invalid.

Details of all invalid or missing data are recorded in the Valid Data Exception Reports.
Validation is performed by the analyst, and the validation is reviewed. Graphs and tables are generated based on the validated five minutes and one-hour data as appropriate.

### 2.4.2. Reporting

Data is reported in eight Microsoft Excel format files named

- NSW WestConnex_New M5_Arncliffe 1 (West Botany St) Monthly Data Report February 2020.xls
- NSW WestConnex_New M5_Arncliffe 2 (Eve St) Monthly Data Report February 2020.xls
- NSW WestConnex_New M5_Barton Park Monthly Data Report February 2020.xls
- NSW WestConnex_New M5_Kingsgrove 1 (MOC1) Monthly Data Report February 2020.xls

## New M5 Project

Report No: DAT15592
WestConnex

- NSW WestConnex_New M5_Kingsgrove 2 (Kingsgrove Rd) Monthly Data Report February 2020.xls
- NSW WestConnex_New M5_St Peters 1 (Campbell St) Monthly Data Report February 2020.xls
- NSW WestConnex_New M5_St Peters 2 (SPI) Monthly Data Report February 2020.xls
- NSW WestConnex_New M5_St Peters 3 (St Peters St) Monthly Data Report February 2020.xls

Each Excel file consists of 6 worksheets:

1. Cover
2. Contents
3. 5 Minute Data
4. 1 Hour Data
5. 24-hour Data
6. Valid Data Exception Report

The data contained in this report is based on Australian Eastern Standard Time.
All averages are calculated from the five-minute and the one-hour data. Averages are based on a minimum of $75 \%$ valid readings within the averaging period. Where data capture is low for a particular parameter, summary values (e.g. monthly maximum and minimum) may be based on less than $75 \%$ valid samples. The reader should use caution when interpreting these values as they may not be representative of conditions for the entire sample period.

Averaging periods of eight hours or less are reported for the end of the period, i.e. the hourly average 02:00am is for the data collected from 1:00am to 2:00am. One-hour averages are calculated based on a clock hour. One day averages are calculated based on calendar days.

### 3.0 Air Quality Goals

The air quality goals and criteria for pollutants monitored at the New M5 project ambient monitoring sites are based on SSI 6788 Planning Approval Condition E14. The air quality goals and criteria are shown in Table 4 below.

Notes: The measurement uncertainty (as outlined in Table 5) is not considered when assessing exceedences of the air quality standards/goals. Exceedances are only reported for above goal values, based on the decimal places reported.

Table 4: New M5 Project - Air Quality Goals

| Parameter | Time Period | Goal Level | Units |
| :---: | :---: | :---: | :---: |
| CO | 8 hour rolling average | 9.0 | ppm |
| $\mathrm{NO}_{2}$ | 1 hour | 0.12 | ppm |
| $\mathrm{PM}_{10}$ | 1 day | 50 | $\mu \mathrm{g} / \mathrm{m}^{3}$ |
|  | 1 year | 25 | $\mu \mathrm{g} / \mathrm{m}^{3}$ |
| PM ${ }_{2.5}$ | 1 day | 25 | $\mu \mathrm{g} / \mathrm{m}^{3}$ |
|  | 1 year | 8 | $\mu \mathrm{g} / \mathrm{m}^{3}$ |

Note:
Exceptional events are excluded from this standard. As per the Ambient Air Quality NEPM, Exceptional event means a fire or dust occurrence that adversely affects air quality at a particular location and causes an exceedance of 1-day average standards in excess of normal historical fluctuations and background levels and is directly related to: bushfire; jurisdiction authorized hazard reduction burning; or continental scale windblown dust.

Ecotech will include any valid data identified as being associated with an exceptional event in all report tables and graphic representations. For this reason, and as the project monitoring results are part of the baseline monitoring regime, 1-day averages associated with exceptional events will not be counted as exceedences of the Air Quality goals. Monitoring and reporting of exceedences during the operational project will be in accordance with the Planning Approval Conditions E15, E16 and E17.

## New M5 Project

### 4.0 Calibrations and Maintenance

### 4.1. Units and Uncertainties

The uncertainties for each parameter have been determined by the manufacturer's tolerance limits of the equipment's parameters, and by the data collection standard method.

The reported uncertainties are expanded uncertainties, calculated using coverage factors which give a level of confidence of approximately $95 \%$. Where an uncertainty value is not available for a particular parameter, the manufacturer's stated accuracy is included, as indicated by a footnote.

Table 5: Units and Uncertainties

| Parameter | Units | Resolution | Uncertainty | Measurement Range ${ }^{4}$ |
| :---: | :---: | :---: | :---: | :---: |
| NO, $\mathrm{NO}_{\mathrm{x}}(\mathrm{S} 40)$ | ppb | 1 ppb | $\begin{gathered} \pm(6 \% \text { of reading }+11 \mathrm{ppb}) \\ \mathrm{K} \text { factor of } 2.0 \end{gathered}$ | 0 to 500 ppb <br> LDL=0.4ppb |
| $\mathrm{NO}_{2}(\mathrm{~S} 40)$ | ppb | 1 ppb | $\begin{gathered} \pm(6 \% \text { of reading }+11 \mathrm{ppb}) \\ \text { K factor of } 2.0 \end{gathered}$ | 0 to 500 ppb <br> LDL=0.4ppb |

### 4.2. Maintenance

### 4.2.1. Calibration \& Maintenance Summary Tables

The last calibrations for the following parameters were performed on the indicated dates. Data supplied after this time is subject to further validation, to be performed at the next calibration cycle.

Note: Maintenance and calibration dates may differ, as calibrations may be less frequent than scheduled maintenance visits.

Tables 6-13 indicate when the particulate and gas and meteorological equipment were last maintained/calibrated.
"Calibration cycle" refers to the frequency of calibrations and intermediate calibration checks. The most frequent check or calibration is listed here.

Table 6: New M5 Project Arncliffe 1 (West Botany St) Maintenance Table February 2020

| Parameter | Date of Last <br> Scheduled <br> Maintenance | Maintenance Type | Date of Last <br> Calibration | Calibration <br> Cycle |
| :---: | :---: | :---: | :---: | :---: |
| NO, $\mathrm{NO}_{2}, \mathrm{NO}_{x}$ | $02 / 03 / 2020$ | Monthly | $02 / 03 / 2020$ | Monthly |
| CO | $02 / 03 / 2020$ | Monthly | $02 / 03 / 2020$ | Monthly |
| $\mathrm{PM}_{10}$ | $02 / 03 / 2020$ | Monthly | $08 / 01 / 2020$ | 6 Monthly |
| $\mathrm{PM}_{2.5}$ | $02 / 03 / 2020$ | Monthly | $02 / 03 / 2020$ | Yearly |
| WS/WD/Sigma | Monthly | $19 / 12 / 2018$ | 2 yearly |  |
| Differential <br> Temperature 2 m | $02 / 03 / 2020$ | Monthly | $15 / 01 / 2020$ | 6 Monthly |

### 5.0 Results

### 5.1. Data Capture

Valid data capture refers to the amount of valid data collected during the report period. It is based on 5-minute data, for gaseous and meteorological parameters and 1-hour data for particulate parameters.

The percentage of valid data captured is calculated using the following equation:
Valid Data capture $=($ Reported air quality data $/$ Total data $) \times 100 \%$

Where:

- Reported air quality data $=$ Number of samples (instrument readings) which have been validated through a quality assured process and excludes all data errors, zero data collection due to calibration, equipment failures, planned and unplanned maintenance.
- Total data = Total number of samples (instrument readings) expected for the sampling period. Total data is calculated based on the same averaging period as "reported air quality data" and the duration of the corresponding report period. e.g. for 5 -minute data collected over a month of 31 days, the total data would be equal to 12 ( 5 -minute samples in an hour) x 24 (hours in a day) $\times 31$ (days in a month) $=8928$ samples .

Table 14 below displays data capture statistics for February 2020. Bold values in the table indicate data capture below 95\%.

Details of all invalid or missing data affecting data capture are included in the Valid Data Exception Tables, see section 6.0.

## WestConnex

### 5.3. Tabulated data

### 5.3.1. Annual average

Table 23 and 24 display monthly averages of the $\mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ parameters collected at the New M5 project ambient air monitoring stations from February 2020 to the end of the current month. Tables 23 and 24 require at least $75 \%$ valid data to display a monthly average. This gives an indication of performance against the annual objectives.

Table 23: 12 months to date averages of $\mathrm{PM}_{10}\left(\mu \mathrm{~g} / \mathrm{m}^{3}\right)$ at the WestConnex New M5 ambient air monitoring stations

| Month | Arncliffe 1 <br> (West <br> Botany St) | Arncliffe <br> (Eve St) | Barton <br> Park | Kingsgrove 1 <br> (MOC1) | Kingsgrove 2 <br> (Kingsgrove <br> Rd) | St Peters 1 <br> (Camplell <br> St) | St Peters 2 <br> (SPI) | St Peters 3 <br> (St Peters <br> St) |

### 6.0 Valid Data Exception Tables

Tables 25 to 32 below detail all changes made to the raw data set during the validation process. An explanation of reasons given in the table can be found in Appendix 2.

Table 25: Arncliffe 1 (West Botany St) Valid Data Exception Table

| Start Date | End Date | Reason | Change Details | User <br> Name | Change Date |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 01/02/20 00:00 | 07/02/20 09:55 | Linear multiplier of $A=1.00$ and $B=1.09$ applied to correct overnight span drift | $\mathrm{NO}, \mathrm{NO}_{2}, \mathrm{NO}_{\mathrm{x}}$ | DD | 27/03/2020 |
| 01/02/20 01:00 | 29/02/20 01:45 | Automatic span and zero checks once daily for 40-45 minutes | $\mathrm{CO}, \mathrm{NO}, \mathrm{NO}_{2}, \mathrm{NO}_{\mathrm{x}}$ | DD | 27/03/2020 |
| 01/02/20 23:45 | 29/02/20 23:45 | Background checks once daily for 5-10 minutes | CO | DD | 27/03/2020 |
| 03/02/20 10:35 | 03/02/20 12:25 | Negative $\mathrm{PM}_{10}$ data readings caused by rainfall, data kept as valid | None | DD | 27/03/2020 |
| 05/02/20 01:50 | 05/02/20 23:40 | Linear offset of $A=0.00 \mathrm{ppm}$ and $B=-$ 0.15 ppm applied to correct baseline | CO | DD | 27/03/2020 |
| 07/02/20 10:00 | 07/02/20 10:30 | Unscheduled maintenance - performed remote calibration | $\mathrm{CO}, \mathrm{NO}, \mathrm{NO}_{2}, \mathrm{NO}_{\mathrm{x}}$ | DD | 27/03/2020 |

### 7.0 Report Summary

- Percentage availability for ten parameters at New M5 Project was below 95\%, refer to Table 14, and Tables 25-32 for details.
- There were seven recorded readings over the air quality goals at the WestConnex New M5 Ambient Air Quality Monitoring Network for the reporting month. Please refer to Tables 1522 in Section 5.2 - Air Quality Monthly Summary for further information.

## Appendix 1 - Definitions \& Abbreviations

| ERS | Environmental Reporting Services |
| :---: | :---: |
| AQMS | Air Quality Monitoring Station |
| AQM | Air Quality Monitor |
| BAM | Beta Attenuation Monitors |
| TEOM | Tapered Element Oscillating Microbalance |
| - | Degrees (True North) |
| K | Kelvin |
| $\mu \mathrm{g} / \mathrm{m}^{3}$ | Micrograms per cubic metre at standard temperature and pressure $\left(0^{\circ} \mathrm{C}\right.$ and 101.3 kPa) |
| AT | Ambient Temperature |
| calm | Wind conditions where the wind speed is below the operating range of the wind sensor |
| CO | Carbon monoxide |
| LDL | Lower Detectable Limit |
| $\mathrm{mg} / \mathrm{m}^{3}$ | Milligrams per cubic metre at standard temperature and pressure $\left(0^{\circ} \mathrm{C}\right.$ and 101.3 kPa) |
| mm | Millimeters |
| NO | Nitric oxide |
| $\mathrm{NO}_{2}$ | Nitrogen dioxide |
| $\mathrm{NO}_{\text {x }}$ | Oxides of nitrogen |
| PM ${ }_{10}$ | Particulate less than 10 microns in equivalent aerodynamic diameter |
| PM 2.5 | Particulate less than 2.5 microns in equivalent aerodynamic diameter |

New M5 Project

WestConnex

| ppb | Parts per billion |
| :--- | :--- |
| ppm | Parts per million |
| RH | Relative Humidity |
| WD | Vector Wind Direction |
| WS | Vector Wind Speed |

## Appendix 2 - Explanation of Exception Table

Automatic background check refers to when analyser samples zero air and measures the level of the concentration voltage. This voltage is taken as the zero signal level and this value is subtracted from any subsequent readings as an active zero compensation. This is the analyser's fine zero measurement.

Automatic span/zero check. The E-Sampler is programmed to perform a zero calibration check whereby air is passed through filter element, removing particulates, before entering the sensor in the analyser. Data is invalidated when these checks occur.

Beta count failure refers to a fault in the functioning of the EBAM. A one minute beta count was less than the maximum acceptable counts during operation.

Calibration check outside tolerance refers to when the calibration values are outside the tolerance limits set for the precision check.

Calibration correction factor applied to data refers to an offset or multiplier applied to the data. This operation may be performed for a number of reasons including: (a) when a clear trend / drift outside the tolerance limit can be demonstrated by repeated operation precision checks, (b) when a correction is required on previously logged data due to a calibration check being outside the allowable tolerance

Commissioning refers to the initial setup and calibration of the instrument when it is first installed. For some instruments there may be a stabilisation period before normal operation commences.

Data transmission error refers to a period of time when the instrument could not transmit data. This may be due to interference, or a problem with the phone line or modem.

Equipment malfunction/instrument fault refers to a period of time when the instrument was not in the normal operating mode and did not measure a representative value of the existing conditions.

Gap in data/data not available refers to a period of time when either data has been lost or could not be collected.

Instrument Alarm refers to an alarm produced by the instrument. A range of alarms can be produced depending on how operation of the instrument is being affected.

Instrument out of service refers to a lack of data due to an instrument being shut down for repair, maintenance, or factory calibration.

## New M5 Project

Report No: DAT15592
WestConnex

Linear offset or multiplier refers to when an offset or multiplier has been applied between two points where the values of the offset or multiplier are different and the correction is interpolated between the two points.

Logger error refers to when an error occurs and instrument readings are not correctly recorded by the logger.

Maintenance refers to a period of time when the logger/instrument was switched off due to maintenance.

Overnight span/zero out of tolerance refers to when the span/zero reading measured by the analyser during an automatic precision check falls outside of the expected concentration limits.

Power Interruption refers to no power to the station therefore no data was collected at this time.
Remote Calibration refers to when a technician remotely connects to the station and manually performs a span check.

Stabilisation after power interruption refers to the startup period of an instrument after power has been restored.

Static offset or multiplier refers to when a single offset or multiplier has been applied to the data between two points either to increase or decrease the measured value.

Tape break refers to the breaking of the EBAM/BAM sample tape during operation.

## Comparison of WestConnex new M5 sites with EPA sites

Feb 2020

## Comparison of WestConnex new M5 sites with EPA sites

[^3]
[^0]:    ${ }^{3}$ Superseded by AS/NZ 3580.142014 but specifically referenced in ministerial conditions.

[^1]:    ${ }^{4}$ Uncertainties may not be calculated based on the full measurement range. The max measurement range for gas analysers is defined as the full scale (FS=Span/0.8)

[^2]:    ${ }^{5}$ Exceedances are based on the decimal places reported.

[^3]:    Feb 2020
