#### **Distribution of controlled copies**

This Sustainability Strategy is available to all personnel and sub-contractors via the Project document control management system. An electronic copy can be found on the Project website.

### 1 Introduction

#### 1.1 Purpose

This Sustainability Strategy has been prepared to provide a high-level outline on how the M4-M5 Link Tunnel (the Project) will achieve a minimum "Excellent" 'Design' and 'As built' rating under the Infrastructure Sustainability Council of Australia infrastructure rating tool, in accordance with the NSW Minister for Planning's Conditions of Approval (CoA) E199 and E200.

Implementing this strategy as well as the Sustainability Management Plan will ensure that the Project meets the requirements of the CoA.

| Approval<br>Requirement | Requirement   | Reference  |
|-------------------------|---|--|
| CoA E199                | A Sustainability Strategy must be prepared to<br>achieve a minimum "Excellent" 'Design' and 'As<br>built' rating under the Infrastructure<br>Sustainability Council of Australia infrastructure<br>rating tool.   | This Document  |
| CoA E200                | The Sustainability Strategy must be submitted<br>to the Secretary for information prior to the<br>commencement of works, and must be<br>implemented throughout construction and<br>operation.   | Refer to Section 1.1   |
| CoA E201                | Opportunities to reduce operational greenhouse<br>gas emissions must be investigated during<br>detailed design. The sustainability initiatives<br>identified must be implemented, reviewed,<br>updated regularly throughout the design<br>development and construction. | A Sustainability Management<br>Plan will be prepared prior to<br>the commencement of<br>construction to address in<br>detail how sustainability will<br>be managed in accordance<br>with the Project CoAs. |

Table 1-1 CoA requirements

This Sustainability Strategy is an overarching strategic document identifying the credits to be targeted throughout the design and construction phase in order to meet the required ISCA rating. This document is not intended to address all CoA and Revised Environmental Mitigation Measures applicable to the Project. A Sustainability Management Plan will be prepared prior to the commencement of construction to address in detail how sustainability will be managed in accordance with the Project CoAs.

The Sustainability Strategy will be submitted to the Secretary for information prior to the commencement of works, and will be implemented throughout construction and operation as applicable.

#### 1.2 Project description

The WestConnex M4-M5 Link project is being constructed in two stages:

- Stage 1 (the Project): M4-M5 Link Mainline Tunnels
- Stage 2: Rozelle Interchange and Iron Cove Link

SMC has engaged Lendlease Samsung Bouygues Joint Venture (LSBJV) to design and construct Stage 1 of the project. The key features of the mainline tunnel project include:

- Twin mainline motorway tunnels between the M4 East at Haberfield and the New M5 at St Peters. Each tunnel would be around 7.5 kilometres long and would generally accommodate up to four lanes of traffic in each direction
- Connections of the mainline tunnels to the M4 East project, comprising:
  - A tunnel-to-tunnel connection to the M4 East mainline stub tunnels east of Parramatta Road near Alt Street at Haberfield
  - Entry and exit ramp connections between the mainline tunnels and the Wattle Street interchange at Haberfield (which is currently being constructed as part of the M4 East project)
  - Minor physical integration works with the surface road network at the Wattle Street interchange including road pavement and line marking
- Connections of the mainline tunnels to the New M5 project, comprising:
  - A tunnel-to-tunnel connection to the New M5 mainline stub tunnels north of the Princes Highway near the intersection of Mary Street and Bakers Lane at St Peters
  - Entry and exit ramp connections between the mainline tunnels and the St Peters interchange at St Peters (which is currently being constructed as part of the New M5 project)
  - Minor physical integration works with the surface road network at the St Peters interchange including road pavement and line marking
- Construction of tunnel stubs to provide for future underground connection of the mainline tunnels to the Rozelle Interchange and Iron Cove Link
- A motorway operations complex at St Peters (Campbell Road) (MOC5). The types of facilities that would be contained within the motorway operations complexes would include substations, water treatment plants, ventilation facilities and outlets, offices, on-site storage and parking for employees
- Tunnel ventilation systems, including ventilation supply and exhaust facilities, ventilation fans, ventilation outlets and ventilation tunnels
- A new ventilation facility located at the Campbell Road ventilation facility at St Peters
- Fitout (mechanical and electrical) of part of the Parramatta Road ventilation facility at Haberfield (which is currently being constructed as part of M4 East project) for use by the M4-M5 Link project
- Drainage infrastructure to collect surface and groundwater for treatment at dedicated facilities
- Water treatment would occur at the operational water treatment facility at St Peters Interchange (Campbell Road) subject to further environmental assessments and approvals
- Ancillary infrastructure and operational facilities for electronic tolling and traffic control and signage (including electronic signage)
- Emergency access and evacuation facilities, including pedestrian and vehicular cross and long passages and fire and life safety systems
- Utility works, including protection and/or adjustment of existing utilities, removal of redundant utilities and installation of new utilities
- Temporary construction ancillary facilities to facilitate construction of the project would be required at the following locations:
  - Northcote Street, Haberfield (existing M4 East site)

- Parramatta Road, Haberfield
- Parramatta Road, Ashfield
- Wattle Street, Haberfield (existing M4 East site)
- Pyrmont Bridge Road, Camperdown/Annandale
- Campbell Road, St Peters
- Parramatta Road Ventilation Facility, Haberfield
- White Bay, Rozelle.

An overview of the project footprint and ancillary facilities is presented in the Construction Environmental Management Plan and Site Establishment Management Plans.

#### 1.3 Scope

The scope of this Plan is to describe how Lendlease Samsung Bouygues Joint Venture (LSBJV) propose to manage the Project to achieve the sustainability target required under the CoA during the design and construction.

It has been prepared to be compliant with the WestConnex Sustainability Strategy (2017) as discussed in Section 2.1.

## 2 Sustainability Strategy

#### 2.1 SMC Sustainability Strategy

Sydney Motorway Corporation (SMC) was established to finance and deliver the WestConnex motorway, including this Project. Core responsibilities of SMC include procuring and managing contracts relating to the development, construction, funding, operation and maintenance of the Project.

The SMC Sustainability Strategy describes SMC's sustainability commitments, objectives and targets across a range of sustainability themes, including corporate activities as well as the projects delivered by SMC.

The SMC Sustainability Strategy, incorporating the SMC Sustainability Policy, includes a number of objectives and targets which are subsequently embedded into the contract with LSBJV. As a contractor engaged by SMC, the LSBJV are required to complete the contract works in accordance with the SMC strategy which is included herein as Appendix 1: SMC Sustainability Strategy, and to commit to:

- creating lasting value;
- caring for our community, the environment and our people; and
- being efficient.

#### 2.2 Project Sustainability Policy

A Sustainability Policy will be developed following a series of workshop and collaboration sessions with the design and construction teams. The Policy will be consistent with Man -1 credit theme within the ISCA framework. The agreed Policy will be presented within the Construction Environmental Management Plan (CEMP).

#### 2.3 Risks and Opportunities

Sustainability risks and opportunities for the WestConnex M4-M5 Link Tunnels (the project) will be integrated with the project's risk management approach as detailed in the Risk Management Plan (RMP).

LSBJV will monitor and review risks and opportunities on a regular basis, at key stages of the project and at least annually. Key stages of the project include significant changes to the proposed design, construction methodology, or any other aspect that would cause a change to the risk profile. Risks, treatment measures and responsibilities will be recorded in the Risk Register.

The Sustainability Manager will participate in the risk and opportunity process by attending the risk review meetings.

Risk & Opportunity (R&O) Workshops will be held during the Design and the Construction phases to address specific environmental and social risks involving a cross section of the project team including design engineers, community team members, environmental team members, commercial team members and construction engineers. The workshops will be used to:

- identify risks and opportunities;
- rate the risk in terms of likelihood and consequences;
- develop and agree measures to eliminate or control the risk, or capitalise on the opportunity;
- confirm that the residual risk (after application of measures) is acceptable;
- assign the appropriate risk or opportunity owner; and

• document all the above in a Risk Register.

The R&O owner will be responsible for taking the agreed actions to mitigate or eliminate the risk, or capitalise on the opportunity. The R&O owner will provide feedback to the Risk Manager, who will update the Risk Register accordingly to reflect the actions taken.

#### 2.4 Roles and Responsibilities

To support the delivery of project sustainability objectives, LSBJV will appoint a sustainability management team comprising senior personnel. The sustainability team members will have substantial experience in the delivery of sustainability outcomes on large infrastructure projects. The Environment & Sustainability Manager, Sustainability Manager and Sustainability Analyst will be Infrastructure Sustainability Council of Australia (ISCA) Accredited Professions (ISAP). In addition, a representative from the LSBJV Senior Leadership team will be nominated as a Sustainability Representative. This role will be responsible for driving a strong sustainability culture and facilitating the delivery of sustainable aspirations from senior management level of the Joint Venture.

A summary of positions with responsibility for managing sustainability requirements and the overall implementation of SMC's sustainability objectives is presented in Table 2-1.

| Table 2-1: Sustainability | roles and re | esponsibilities |
|---------------------------|--------------|-----------------|
|---------------------------|--------------|-----------------|

| Sustainability Roles & Responsibilities |   |  |  |  |  |  |
|---|---|--|--|--|--|--|
| Project Director                        | Project Director  |  |  |  |  |  |
| Bosponsibilition                        | Overall delivery of the project including satisfaction of the contractual and Conditions of Approval (CoA) including the sustainability requirements. |  |  |  |  |  |
| Responsibilities                        | Ensuring that the Environment & Sustainability Manager has the resources they need to fulfil the requirements.  |  |  |  |  |  |
| Environment & S                         | ustainability Manager   |  |  |  |  |  |
|   | Central responsibility for managing sustainability including accountability for environmental, social and economic aspects.                           |  |  |  |  |  |
| Responsibilities                        | Oversight of the implementation of the Sustainability Plan and achievement of an ISCA IS Tool Design and As Built 'Excellent' Rating.                 |  |  |  |  |  |
|   | Interface with Project Director and other project executive level staff involved in the decision-making processes.                                    |  |  |  |  |  |
|   | Be a current IS accredited professional   |  |  |  |  |  |
| Sustainability Ma                       | nager   |  |  |  |  |  |
|   | Champion the drive for sustainable outcomes for the project.  |  |  |  |  |  |
|   | Be the key contact between the Project and ISCA   |  |  |  |  |  |
|   | Be a current IS accredited professional   |  |  |  |  |  |
| Responsibilities                        | Be the key sustainability professional in accordance with the requirements of the SWTC  |  |  |  |  |  |
|   | Provide sustainability advice to the project.   |  |  |  |  |  |
|   | Develop and monitor the implementation of the Sustainability Plan.  |  |  |  |  |  |
|   | Review and update of the Sustainability Plan.   |  |  |  |  |  |

| Sustainability Roles & Responsibilities   |  |  |  |  |  |
|---|--|--|--|--|--|
| Ensure Construction Environment Management Plan (CEMP), and its sub-plan incorporates sustainability requirements.  |  |  |  |  |  |
|   | Maintenance of documentation and records to evidence sustainability requirements.                    |  |  |  |  |
|   | Facilitation of sustainability communications between key project parties including the SMC and RMS. |  |  |  |  |
|   | Development of sustainability training materials.  |  |  |  |  |
| Maintenance of sustainability tracking records including monitoring of sustain performance across all requirements. |  |  |  |  |  |
| Management and coordination of ISCA IS Rating documentation.  |  |  |  |  |  |
| Communication with and coordination of, sustainability requirements with the  |  |  |  |  |  |
|   | Communicate sustainability requirements to relevant project personnel.                               |  |  |  |  |
|   | Provide strategic support in relation to sustainability priorities and processes.                    |  |  |  |  |
| Sustainability Analyst  |  |  |  |  |  |
|   | Collection of data relevant to sustainability requirements.  |  |  |  |  |
| Responsibilities  | Maintenance of sustainability records.   |  |  |  |  |
|   | Support for the development of ISCA IS Rating documentation.   |  |  |  |  |

#### 2.5 Governance Actions

Key sustainability actions and the allocation of responsibility are detailed in Table 2-2.

#### Table 2-2: Key sustainable actions and responsibility

| Action   | Responsibility                          |
|--|---|
| Register the project with ISCA   | Environment & Sustainability<br>Manager |
| Develop, implement and maintain governance structures,<br>processes and systems, ensuring integration of all<br>sustainability considerations, initiatives, monitoring and<br>reporting. | Environment & Sustainability<br>Manager |
| Develop, implement and maintain a sustainability<br>assurance framework to track compliance with<br>sustainability targets.  | Environment & Sustainability<br>Manager |
| Participate in regular sustainability knowledge sharing workshops during the D&C stages.   | Environment & Sustainability<br>Manager |
| Allow for and address sustainability objectives and requirements in design briefings, design documentation development processes, site inductions and D&C project plans.                 | Environment & Sustainability<br>Manager |

#### 2.6 Initiatives

LSBJV has investigated sustainability initiatives to potentially be adopted during the delivery of the project. The costs, benefits and programme impacts are detailed in Table 2-3.

Table 2-3: Sustainability initiative options

| Option<br>Description  | Uption COSts CAPEX Ceconomic Impacts (i                              |  | Programme<br>Impacts (if<br>any) | Comments/Issues   |
|--|--|--|----------------------------------|---|
| Implementation<br>of public facing<br>internet based<br>complaints<br>system for<br>mobile phones. | blementation<br>bublic facing<br>ernet based<br>mplaints<br>stem for |  | N/A                              | To provide external<br>interface native to mobile<br>phones to allow<br>community members to<br>provide timestamped,<br>geolocated feedback on<br>construction activities and<br>attach photos. |

#### 2.7 Sustainability Targets

LSBJV will achieve or improve on the sustainability targets identified in Table 2-4.

#### Table 2-4 Nominated sustainability targets

| No. | Category   | Minimum<br>Requirement | Contractor's Nominated<br>Requirement | Comments   |
|-----|--|------------------------|---------------------------------------|--|
| 1   | IS Design Rating   | 55/100                 | 65/100                                | See Appendix 2 – ISCA Scorecard (v1.2) for planned<br>Design Scenario  |
| 2   | IS As-Built Rating   | 55/100                 | 65/100                                | See Appendix 3 – ISCA Scorecard (v1.2) for planned<br>As Built Scenario  |
| 3   | Percentage of usable spoil<br>(uncontaminated surplus<br>excavated material)<br>reused/recycled.   | 95%                    | 95%                                   | Wherever possible, VENM material excavated from<br>tunnelling activities to be utilised for beneficial reuse.<br>Spoil tracking systems to be implemented to ensure<br>chain of responsibility maintained for all movements<br>of spoil material off site.   |
| 4   | Percentage of construction and<br>demolition waste<br>(uncontaminated material<br>excluding spoil)<br>reused/recycled.                           | 80%                    | 80%                                   | Uncontaminated construction and demolition waste<br>to be reused on site wherever possible. Where not<br>possible, construction and demolition waste to be<br>sorted (e.g. steel, timber, bricks) and sent to licenced<br>recycling facility. Waste tracking systems to be<br>implemented to ensure waste is being taken to<br>appropriately licensed facilities. Auditing to be<br>undertaken of waste sorting and tracking to ensure<br>that waste reuse and recycling is being undertaken<br>appropriately. |
| 5   | Percentage of construction<br>stage energy sourced from<br>renewable energy generated<br>onsite and/or accredited<br>GreenPower energy supplier. | 20%                    | 20%                                   | 20% of construction stage energy usage to be<br>sourced from accredited GreenPower energy<br>supplier.<br>Cost-benefit to be analysed for installation of solar<br>panels in construction compounds.   |

| No. | Category  | Minimum<br>Requirement | Contractor's Nominated<br>Requirement | Comments  |
|-----|---|------------------------|---------------------------------------|---|
| 6   | Percentage of construction<br>stage energy use offset (in<br>accordance with the Australian<br>Government National Carbon<br>Offset Standard).            | 6%                     | 6%                                    | 6% of construction stage energy usage to be offset in accordance with the Australian Government National Carbon Offset Standard.  |
| 7   | Percentage of annual<br>operational stage energy<br>sourced from renewable<br>energy generated onsite and/or<br>accredited GreenPower energy<br>supplier. | 6%                     | 6%                                    | 6% operational stage energy to be sourced from accredited GreenPower energy supplier.   |
| 8   | Percentage of operational<br>energy use offset (in<br>accordance with the Australian<br>Government National Carbon<br>Offset Standard).                   | No minimum set         | 0%                                    | Operational offsets to be determined by motorway<br>Operator during Operational phase. No allowance<br>has been made for the purchase of offset credits for<br>Operational phase during Construction phase.   |
| 9   | Percentage of non-potable<br>water demand which is<br>sourced from non-potable<br>water sources during<br>construction.                                   | 15%                    | 15%                                   | Water generated through water treatment processes<br>at construction tunnelling compounds to be reused<br>for dust suppression, wheel washing and other<br>construction purposes that would otherwise require<br>the purchase of potable water for non-potable uses.                        |
| 10  | Percentage of non-potable<br>water demand which is<br>sourced from non-potable<br>water sources during<br>operation.                                      | 15%                    | 15%                                   | Rainwater captured from roofs of operational<br>structures to be reused where appropriate, such as<br>in toilet flushing and landscape maintenance. Water<br>captured in tunnel during operation and treated<br>through WTP to be available for use in operational<br>wash down facilities. |

| No. | Category  | Minimum<br>Requirement | Contractor's Nominated<br>Requirement | Comments   |
|-----|---|------------------------|---------------------------------------|--|
| 11  | Percentage of water<br>(rainwater, stormwater,<br>wastewater, groundwater,<br>tunnel inflow water)<br>generated/collected during<br>construction which is reused,<br>recycled or reclaimed. | 15%                    | 15%                                   | Water captured in tunnel during construction to be<br>treated through WTPs and reused for non-potable<br>uses such as dust suppression, wheel washing and<br>other non-potable construction purposes. Rainwater<br>from roofs of construction compounds to be captured<br>in rainwater tanks and reused where appropriate for<br>non-potable uses such as toilet flushing and plant<br>wash-down facilities. |
| 12  | Percentage of water<br>(rainwater, stormwater,<br>wastewater, groundwater,<br>tunnel inflow water)<br>generated/collected during<br>operation which is reused,<br>recycled or reclaimed.    | 5%                     | 5%                                    | Rainwater captured from roofs of operational<br>structures to be reused where appropriate, such as<br>in toilet flushing and landscape maintenance. Water<br>captured in tunnel during operation and treated<br>through WTP to be available for use in operational<br>wash down facilities.  |
| 13  | Percentage of non-potable<br>water which is used during the<br>operation of<br>roadheaders/tunnelling<br>machines.  | No minimum set         | 15%                                   | Dust suppression utilised by roadheaders during<br>construction phase tunnelling activities to be reused<br>from WTP outlets. Further water reuse in tunnelling<br>equipment to be investigated during Construction<br>phase based on water composition analysis.  |
| 14  | Percentage of cement<br>replacement material,<br>measured by mass, used in<br>concrete during the<br>construction stage.  | 5%                     | 5%                                    | 5% concrete replacement material, measured by mass, will be used is concrete during the Construction phase.  |
| 15  | Percentage of recycled<br>material used in road base and<br>sub base during the<br>construction stage.  | 10%                    | 10%                                   | 10% recycled material will be used in road base and sub base during Construction phase.  |

|-----|---|------------------------|---------------------------------------|---|
| 16  | Percentage of timber to be<br>sourced from either<br>reused/recycled timber or from<br>sustainably managed forests<br>that have obtained Forest<br>Management Certification<br>(FMC). | 100%                   | 100%                                  | 100% per cent of all timber products used in the<br>project will be sourced from either reused/recycled<br>timber or from sustainably managed forests that<br>have obtained Forest Management Certification<br>(FMC). |

## 3 Indicative ISCA V1.2 Scorecard

LSBJV will be targeting the indicative design phase ISCA credits as identified in Table 3-1, and indicative as-built ISCA credits identified in Table 3-2.

#### 3.1 Design

Table 3-1: Indicative design phase sustainability targets

| Credit | Name of credit  | Materiality<br>Score | Target<br>Level | Target<br>Score | Comments  |
|--------|---|----------------------|-----------------|-----------------|---|
| Man-1  | Sustainability<br>leadership and<br>commitment                | 2                    | 3               | 1.12            | Sustainability policies and objectives stated in the Environmental Impact Statement (EIS). Objectives included in the D&C Deed and SWTC. Sustainability requirements stated in tender returnables, D&C Deed and SWTC. Sustainability requirements (e.g. reporting) to be included in subcontracts. Sustainability objectives publicly available in EIS and on project website. Community education programs and development of workplace skills through training hub.   |
| Man-2  | Risk and<br>opportunity<br>management                         | 2                    | 2               | 1.12            | Risk assessments will be conducted at the start of project and will include participation<br>of senior leadership. Management plans will undergo at least annual revision.<br>Opportunities to be assessed as part of development of Sustainability Plan. Risk and<br>opportunities assessed to cover environmental, social and economic aspects.   |
| Man-3  | Organisational<br>structure, roles<br>and<br>responsibilities | 2                    | 2               | 1.12            | Sustainability to be centrally managed by Environment & Sustainability Manager.<br>Environment & Sustainability Manager to be ISAP as will members of Sustainability<br>team responsible for implementation of management plan. Monitor and review of<br>sustainability systems to be undertaken by external sustainability professional every<br>quarter during pre-construction.  |
| Man-4  | Inspection and auditing                                       | 2                    | 2               | 1.12            | Weekly environmental inspections specified in CEMP. Weekly sustainability<br>inspections to take place as part of environmental inspections. Environmental and<br>Sustainability audits of the management system will be conducted. Minimum of one<br>external pre-construction (design) audit and four audits annually during construction<br>with at least one being external. Additional audits to be undertaken include internal<br>and external waste audits, annual stakeholder engagement audit and energy audits. |
