

Environment Protection Licence Monitoring Data

Project Name:	WestConnex Stage 3A - M4-M5 Link Mainline Tunnels
Monitoring Period:	18 October 2018 – 31 October 2021
Licensee:	Samsung C&T Corporation, Bouygues Construction Australia Pty Ltd, Acciona Infrastructure Projects Australia Pty Ltd
Environment Protection Licence Number:	21149
Premise Address:	WestConnex between M4 East at Haberfield and The New M5 at St. Peters, Marrickville NSW 2204
Public Register:	https://apps.epa.nsw.gov.au/prpoeoapp/Detail.aspx?instid=21149&id=21149&option=licence&searchrange=licence&range=POEO%20licence&prp=no&status=Issued

Monitoring Type: Water Discharge Monitoring

Discharge / Monitoring Point: 3 - Pyrmont Bridge Road Tunnel Site (C9)

1. Surface Water Discharge

*The Project EPL was varied on 15 May 2020 to increase the zinc concentration limit for discharge point 3 from 0.023 mg/L to 0.04 mg/L.

3. Explanation of Exceedances

8/01/2019: Monthly water treatment plant (WTP) samples were taken on the 8/01/2020. Results were received on 10/01/2020 and returned elevated zinc results in excess of the EPL criteria.

Following this result, discharge from the WTP ceased immediately. This zinc result was less than median zinc level of the receiving waterway (Johnstons Creek) and therefore no environmental harm occurred. The Environment Protection Authority (EPA) was notified and the exceedance will be recorded in the relevant annual return. Works were carried out on the WTP and additional samples were taken on 13/01/2020 with all results compliant with EPL limits. The EPA was advised of the successful WTP works and discharge recommenced.

Discharge / Monitoring Point: 4 – Water Treatment Plant at Campbell Road Civil and Tunnel Site (C10)

*A correlation between TSS and Turbidity (NTU) has been established for the Campbell Road civil and tunnel site.

The Project's EPL was varied on the 1 November 2019 to include an additional discharge point for surface water run-off at Campbell Road site. Discharges after this date are reported under Discharge Point 8 below. Discharges from the WTP will continue to be reported under Discharge Point 4.

*The Project EPL was varied on 15 May 2020 to increase the copper concentration limit for discharge point 4 from 0.003 mg/L to 0.008 mg/L.

Note: Due to on site mechanical issues, discharging from the WTP ceased in January 2020. Discharges recommenced 11 February 2020 following a compliant monthly sample.

3. Explanation of Exceedances

6/03/2020: Monthly WTP samples were taken on the 6/03/2020. Results were received on 9/03/2020 and returned elevated copper results in excess of the EPL criteria.

Following this result, discharge from the WTP ceased immediately. This copper result was less than median copper level of the receiving waterway (Alexandra Canal) and therefore no environmental harm occurred. The EPA was notified and the exceedance will be recorded in the relevant annual return. Works were carried out on the WTP and discharge did not recommence until a compliant sample was received.

30/07/2020: Monthly WTP samples were taken on the 30/07/2020. Results were received on 31/07/2020 and returned elevated ammonia results in excess of the EPL criteria.

Following this result, additional samples were taken immediately to confirm the accuracy of the ammonia exceedance, and the EPA were contacted. Results from the second sample were received on 3/08/2020 and confirmed an ammonia level in excess of the EPL criteria and were discussed with EPA. Following further works on the WTP, a third sample was taken on the 4/08/2020 with all results compliant with EPL limits. The EPA was advised of the successful WTP works and the exceedance will be recorded in the relevant annual return.

Discharge / Monitoring Point: 5 – Northcote Street Tunnel Site (C3a)

** Total chromium reported, however still compliant with licence limits for Chromium IV and III.

The Project's EPL was varied on the 15 May 2020 to remove discharge point 7 following the completion of works and ceasing of discharges from this location.

2. Explanation of Exceedances

30/10/2019 – 13/11/2019: Upon review of the monitoring data for Monitoring Point 7 on 14/11/2019, a decimal point error occurred which resulted in the adoption of an incorrect limit for zinc. Upon correction, three sampling efforts were identified as in exceedance of the EPL limit for zinc. The EPA was notified (reference #EPA104876) and the exceedances will be recorded in the relevant annual return.

Once discovered, works were carried out to improve the performance of the Water Treatment Plant (WTP) on 15/11/2019 to ensure treatment to the EPL limits. Following the completion of these works, additional samples were taken, and all results were compliant with the EPL limits. The EPA was advised of the successful WTP works on 18/11/2019.

Temporary Discharge / Monitoring Point: 8 – Surface Water Run-off at Campbell Road Civil and Tunnel Site (C10)

*A correlation between TSS and Turbidity (NTU) has been established for the Campbell Road civil and tunnel site.

2. Explanation of Exceedances

29/11/2019: A statistical correlation for NTU and TSS was developed in accordance with EPL condition L2.5. Samples are taken approximately every 10th discharge to ensure the correlation remains up to date. Using this correlation, 103 NTU has been determined as equivalent to 50 mg/L TSS. A 40% safety factor is applied with a discharge limit of 62 NTU adopted on site.

Surface water with a 56 NTU was discharged from the Campbell Road site on 29/11/2019 and a sample was taken for lab analysis of TSS. Lab results were received on the 6/12/2019 with a TSS of 62 mg/L and in excess of the EPL criteria.

Following this result, the NTU discharge limit has been lowered to 50 NTU (50% safety factor). Additional sampling for TSS is planned (pending rainfall) to ensure the NTU-TSS correlation is accurate and representative of current site conditions.
