

Parramatta Road Vent Facility, Haberfield

Work is underway on WestConnex which involves widening and extending the M4 and M5 and joining them to create a free-flowing motorway network.

The M4 East will extend the existing M4 from Homebush to Haberfield via underground twin tunnels, each 5.5 kilometres in length and among the widest in the southern hemisphere. They will allow for three lanes of traffic in each direction, saving travel time for motorists and taking traffic off local roads. For more information, visit westconnex.com.au/M4East.

From **Wednesday, 13 February 2017** work will continue to build the Parramatta Road Vent Facility (PRVF), which is located within the Wattle Street Construction Site. A map of the work area is provided overleaf. Once completed, the PRVF will provide tunnel ventilation for the M4 East Project and future M4-M5 Link. Work to construct the PRVF will be undertaken in two stages. The first stage is bulk earthworks which will be followed by building construction.

The tunnel ventilation system will be designed to meet stringent in-tunnel, local and regional air quality criteria imposed by the Department of Planning and Environment under the Conditions of Approval. It will ensure air quality inside the tunnel is maintained and the tunnel has negligible impact on local and regional air quality

The WestConnex ventilation system will be a longitudinal system with air drawn in the entry portals by moving traffic. Ventilation outlets located at the western and eastern ends of the tunnel draw fresh air from outside the portal, which is combined with tunnel air before it's emitted into the atmosphere via the outlet where it's further diluted and dispersed. Monitoring stations, modelling and compliance testing will also make sure air quality is maintained. Monitoring results will be made publicly available and will be independently audited.

To minimise the impact to residents, work has been scheduled to take place between **7.00 am and 6.00 pm Monday to Friday and 8.00 am and 1.00 pm on Saturday**. In some instances, non-noisy work will be completed between **6.00 pm and 7.00 am Monday to Friday and 1.00 pm to 5.00 pm on Saturday**.

The work expected to take up to 6 months to complete and will include:

- earthworks, including excavation and rock breaking
- concrete work, including steel fixing and shotcreting
- drilling and installation of rock bolts and soil nails
- spoil removal.

Two tower cranes will be used throughout the excavation of the PRVF. The cranes are ~60 metres high and will be used to lift plant and equipment in and out of the excavation area.

Equipment used for the noisy work will include excavators, trucks, mobile cranes, concrete trucks, concrete saws, rock bolt machine, hand tools, generator, and lighting equipment.

Notification reference: N164

ABOUT WESTCONNEX

WestConnex is part of a broader transport plan for Sydney which includes improved public transport, such as Sydney Metro and light rail, as well as better, more reliable motorway solutions. More than two-thirds of WestConnex will be built underground. Once complete, motorists will be able to avoid up to 52 sets of traffic lights and enjoy significant travel time savings.
